

# TOOL SHEET

## DeepL Translator

DeepL is an online translation service.

### Description

DeepL is an online translation service that uses artificial intelligence to provide high quality translations in many languages. DeepL differs from other online translation tools due to its deep neural network algorithm that is able to process entire sentences and translate them accurately using appropriate context. In addition, DeepL is also able to automatically detect and correct grammatical and syntactic errors in translations. With its simple and intuitive user interface, DeepL has become a popular choice for professionals and individuals who need accurate and fast translations.

### Use

Simply go to the DeepL website and enter the text you wish to translate in the text box provided. Then select the source and target languages for the translation. Once you have entered your text and selected the source and target languages, click on the "Translate" button and DeepL will instantly provide a translation.

You can also use DeepL to translate entire documents by uploading them to the DeepL website.

Currently 31 languages are supported by the software.

### Testimony

Click on the TV on the right to discover a video testimony:

### → Access

Download the application in the App Store (on an Apple device) or in the Google Play Store (on an Android device)

Or go to the website :  
<https://www.deepl.com>

### → Equipment

### → Public

Accessible to all
