TOOL SHEET
SHAZAM

This tool allows you to find or discover the title of a song and the name of its performer in a few seconds.

Description

It is a smartphone application that allows you to recognise the music you hear live. By activating it while the song is playing, the application gives you the name of the song, the performer and the album after a few seconds. It even works offline. This data is also stored in a library of the songs you have shazamed. This allows you to come back to it later.

Use

You are in a bar, a public place or even a friend's house. A song is playing and you can never remember the name of the artist, so you take your smartphone, open the Shazam application, click in the middle to start the shazam and a few seconds later a sheet appears giving you all the information about the song being played.
You're with friends and you're having fun trying to find the name of the song that's playing as quickly as possible! Shazam can help you check the right answers!
If you hear a song you love and want to add to your playlists, Shazame - quickly, you'll have all the information you need in seconds and the song will be stored in your Shazam library!

Testimony

Click on the TV on the right to discover a video testimony :
